Recommendations:

The patient is not in optimal medical condition for the proposed surgery for the following reason(s):

Delayed - Surgery should be delayed for the following reason(s):

The patient is in optimal medical condition to undergo surgery at this time
Further Recommendations: _____

Instructions to patients: _____

Signature _____

MD Name _____

Specialty _____ Date _____

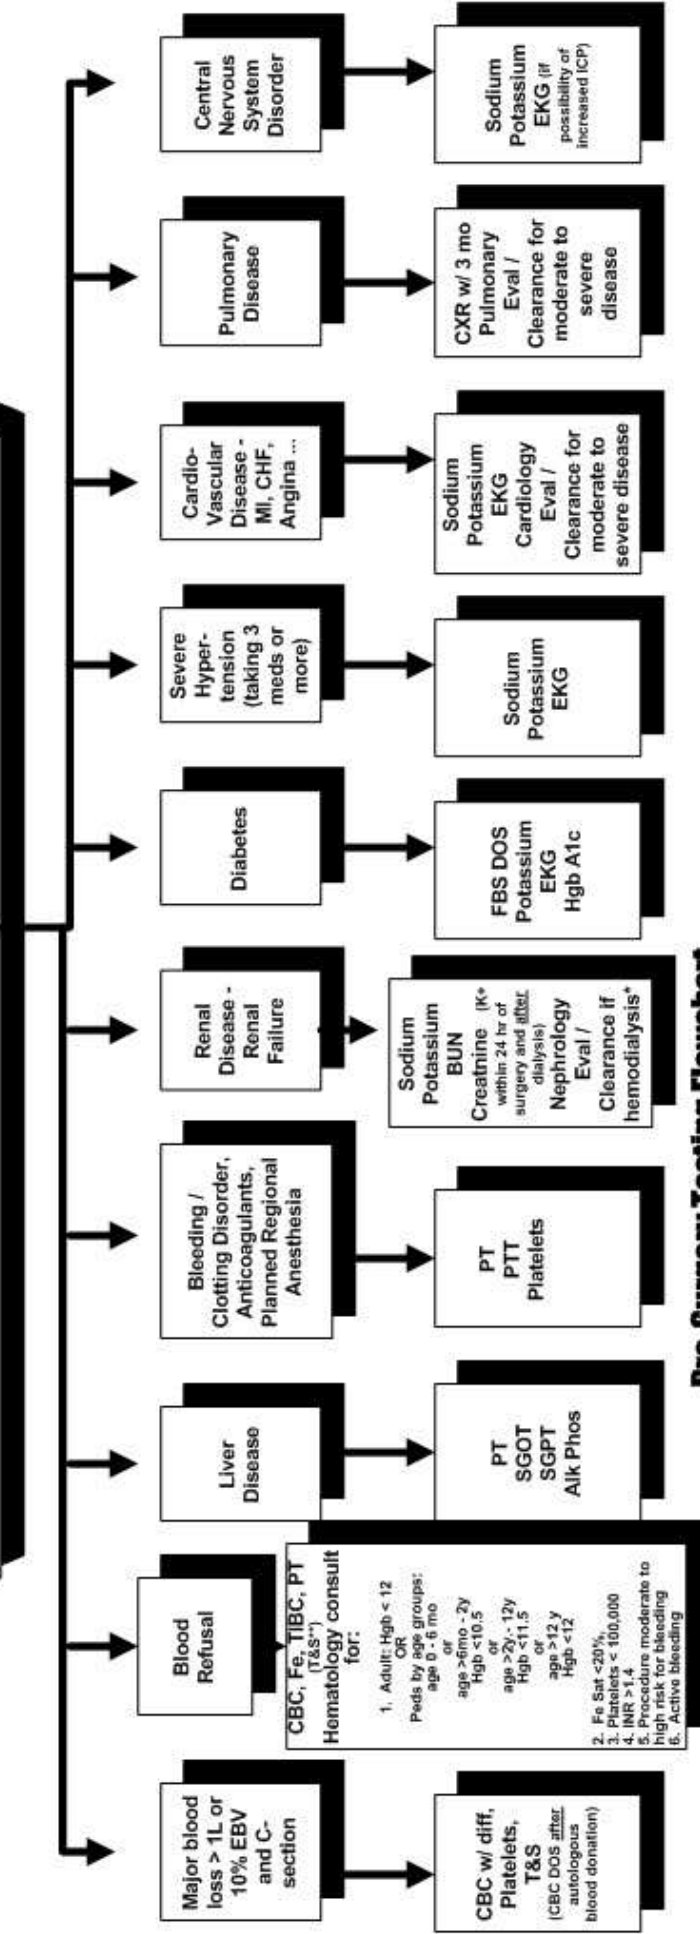

Healthy Patients ASA PS Class 1 & 2

- H & H w/ 3 mo for females (after onset of menses)
- Urine UCG day of surgery (after onset of menses and up to 6 mo following cessation)
- EKG within 6 months for patients age 55 and over, or at least two or more cardiac risk factors (Hyperlipidemia, Family History, Hypertension, Smoking and/or Diabetes)
- Na, K for mild, controlled hypertension if on diuretic med

Patients with MODERATE TO SEVERE SYSTEMIC DISEASE ASA PS CLASS 3 & 4

These are patients with moderate to severe systemic disease that may or may not be incapacitating. In addition to those tests obtained for healthy patients, we recommend the following tests. Tests should be performed within one month unless there has been a significant change in the patient's condition to warrant new studies. Certain herbal products should be discontinued prior to surgery.

Pre-Surgery Testing Flowchart

Anesthesia Services has designed the above flowchart to provide the practitioner with recommendations for the selection of diagnostic studies for patients undergoing anesthesia. The recommendations are offered as a guideline only and are not intended to replace the practitioner's clinical judgment. Following a thorough clinical examination and review of history, the practitioner should select those tests which are medically necessary for the diagnosis and treatment of the patient and those tests that will assist with determination of the patient's capability to undergo surgery and anesthesia. For additional information or consultation, please contact: Anesthesia Services at Baptist - South Miami Hospitals

* ESRD on hemodialysis with history of stable cardiac disease requires Nephrology clearance only

** T&S for Peds and for patients who have agreed to the administration of Rhogam or Cryoprecipitate

Examples of moderate to severe systemic disease: CAD w/ angina, IDDM, morbid obesity, renal or hepatic insufficiency, COPD w/ SOB, Cardiopulmonary disease, multisystem failure
