Canine Spectra®

DO-IT-YOURSELF VACCINATION GUIDE

Top-quality vaccines for major pet diseases in **single-dose** packets for **do-it-yourself** inoculation. **For just a few bucks per shot.**

Easy Injection Instructions.
Each single-dose bag of Canine
Spectra vaccine contains a syringe
and two vials — one with liquid contents, one with freeze-dried contents.
Use immediately after mixing vaccine
as shown below.

Step One. Insert needle directly through the cap of liquid vial. Withdraw contents into syringe.

Step Two. Inject syringe contents into vial of dried material. Shake well.

Step Three. Withdraw entire vaccine mixture (1 mL) into syringe. Remove air by gently pushing plunger until vaccine just begins to flow from needle.

Step Four. Recommended vaccination site is loose skin at back of neck and shoulder. Gently grasp and elevate a fold of loose skin. Insert needle into soft tissue directly under skin and inject contents of the entire syringe.
