

## GROSSMONT COLLEGE HEALTH PROFESSIONS MANTOUX TUBERCULIN SKIN TEST REQUIREMENTS

NAME: \_\_\_\_\_  
Last First

GCCCD STUDENT ID#: \_\_\_\_\_

All Health Profession students are required to have a 2-step INTRADERMAL TST (MANTOUX) prior to program start, unless previously positive. A TB test or Questionnaire is due yearly for all students. See the following page for more information.

If positive, to be cleared for the Nursing Program, supporting documentation of a positive TB result must accompany this form for any TB test previously completed. **The size of indurations must be measured in mm and a copy of a clear chest x-ray is required to be on file in the program office.**

On this form, a signature and stamp will only be accepted from the following: Physician, Physician Assistant, Nurse Practitioner, Registered Nurse, or Grossmont College Health Services Nurse.

Step #1	
Date: _____ Time Given: _____	Manufacturer: _____ Dose: <u>0.1mL</u> Exp. Date: _____ Lot#: _____ Given By: _____ <div style="text-align: center;">signature</div>
Date: _____ Time Read: _____	Results: _____ mm Read By: _____ <div style="text-align: center;">signature</div>
If Mantoux Positive: Chest X-Ray Required Date: _____	Results: <input type="checkbox"/> Negative <input type="checkbox"/> Positive  (a copy of the report must be submitted with this form to the Program office)

Step #2 (No sooner than 7 days after Step #1)	
Date: _____ Time Given: _____	Manufacturer: _____ Dose: <u>0.1mL</u> Exp. Date: _____ Lot#: _____ Given By: _____ <div style="text-align: center;">signature</div>
Date: _____ Time Read: _____	Results: _____ mm Read By: _____ <div style="text-align: center;">signature</div>
If Mantoux Positive: Chest X-Ray Required Date: _____	Results: <input type="checkbox"/> Negative <input type="checkbox"/> Positive  (a copy of the report must be submitted with this form to the Program office)

## GROSSMONT COLLEGE HEALTH PROFESSIONS MANTOUX TUBERCULIN SKIN TEST INFORMATION

- If you have **never** had a TB test OR if it has been **over 12 months** since receiving your last negative TB test;
  - 1. A baseline “Two-Step” Mantoux Test (PPD) is required for all new students regardless of prior BCG inoculation.
  - 2. After baseline testing, all health care students must have an annual Mantoux Test. If the interval between testing is greater than 364 days, the Two-Step will be repeated.
  
- If you have a documented negative TB test **within 12 months** of entering the program;
  - 1. A “One-Step” is required ONLY if a negative Mantoux test result is documented within the previous 12 months. Date done and proof of this past testing is required. Prior “Two-Step” baseline testing will be accepted only if done no more than 3 months prior to enrollment.
  - 2. After baseline testing, all health care students must have an annual Mantoux Test. If the interval between testing is greater than 12 months, the Two-Step will be repeated.
  
- If you do **NOT** have documentation for a negative TB test done within 12 months of entering the program;
  - 1. A repeat baseline Two-Step” Mantoux Test (PPD) is required. There is no danger in having these tests repeated. This is if documentation is not available to you.
  - 2. After baseline testing, all health care students must have an annual Mantoux Test. If the interval between testing is greater than 12 months, the Two-Step will be repeated
  
- If you have previously had a **positive** Mantoux (PPD) test;
  - 1. All new students with a previously positive Mantoux must provide the following documentation:
    - 1) the reported induration measured in mm and 2) one chest radiograph to exclude a diagnosis of TB disease. After this baseline chest radiograph is performed and the result is documented, repeat radiographs are not needed unless symptoms or signs of TB disease develop or a clinician recommends a repeat chest radiograph OR 3) have a BAMT (blood assay for M. tuberculosis). If the latter, proof of testing with a complete report which provides an interpretation of the test result and indicates the concentration of interferon-gamma. If the BAMT results are “inconclusive” or “positive”, a report of a negative chest x-ray is to be provided.
  - 2. Students with a previously positive Mantoux must have an annual symptom check and evaluation in the Student Health Service.

### Mantoux Conversion

- 1. If a test result becomes positive (induration  $\geq 10\text{mm}$ ) after previously being negative, neither student nor faculty may be on campus or attend class until cleared by a negative chest x-ray report is submitted to the Grossmont Student Health Service.
- 2. Medical evaluation for possible treatment of LTBI is recommended for those individuals with a known recent Mantoux conversion.
